

Friction Materials & Phenolic Bearings

Gemini Oilfield Brake Blocks

April 28, 2011

Dear Customer:

Scan-Pac's new Gemini Oilfield Brake Block material was developed for use on draw-works and well-servicing rigs. Gemini Oilfield provides a constant friction level with excellent fade resistance. This new brown material is also unaffected by oil, grease, or water. In addition to superior performance, this product is available with the fastest delivery in the industry to reduce downtime. With the price savings offered on Gemini Oilfield and the reduced liability in using an asbestos-free product, Gemini Oilfield is the woven block of choice for drilling and service rigs.

These new Gemini Oilfield blocks will be on display at the Offshore Technology Conference in Houston, Texas during the week of May 2nd. If you are planning on attending the show, please visit our booth (#5409 – Main Hall). If you are not planning to attend, there is complete information available about Gemini Oilfield blocks and the all other Scan-Pac products on our recently updated website www.scanpac.com. The website contains all of Scan-Pac's data sheets, MSDS, three product catalogs, recent news and details on the markets that Scan-Pac currently serves.

Scan-Pac Manufacturing, Inc. is a manufacturer of non-asbestos friction materials and phenolic bearings for use in a wide range of industrial and oilfield applications. The company has two manufacturing facilities in Menomonee Falls, Wisconsin and one in Magnolia, Texas. Scan-Pac has been in business for over 38 years.

Best regards,
