SCAN-PAC ANNOUNCES NEW BRAKE RIVET MACHINE

Scan-Pac is pleased to announce the addition of a new High Speed Rivet Machine to our manufacturing capabilities. This addition gives Scan-Pac one more value added offering in addition to bonding, custom packaging, assembly, and KanBan.

The new rivet machine gives us the ability to apply maximum force to the rivet while maintaining consistent rivet height. This is especially important for critical components where accuracy is needed for successful assembly. The machine also offers fast 1/3 second cycle time, controlled jaw carrier for accurate rivet handling, rivet slide assembly, solenoid actuated roller clutch, and an automatic compensator for thickness variation.

We can rivet parts of nearly any shape or size – flat, round facings, arced drum linings, etc. Save time and money by allowing Scan-Pac to do your riveting jobs for you rather than outsourcing or doing them in-house.

Please feel free contact us if you have questions or would like a quote.

For further information on the rest of our friction materials and phenolic bearings please visit our website www.scanpac.com

Thanks & best regards!
